

## Letter of Recommendation

Since its establishment up to now, Sur Yapi has created more than 3 million square meter of living space. The company realizes high quality turn-key projects, starting from the design stage and including development, architecture, construction, manufacturing, that is why security of data belonging is a top priority for our business.

To prevent and protect data from the leakage, Sur Yapi has implemented DLP system by InfoWatch – Traffic Monitor Standard. This product was chosen as the most efficient software, compared to other solutions on the market that has specific settings for construction industry.

Especially for Sur Yapi, InfoWatch has developed Content Filtration Base for construction business, designed to detect critical data of different qualities and categories. InfoWatch Traffic Monitor Enterprise is aimed to protect Sur Yapi company's production and trade secrets and personal data.

Main issue in implementation of the solution was in the complexity of the business sector in general, in variety of documents and data, requiring protection. Here InfoWatch showed commitment to tailor products to all needs, which together with intelligence support and 24/7 helpdesk contributed to our positive impression.

We found our cooperation with InfoWatch to be very effective both in terms of business security and financial efficiency, as software implementation expense has paid itself within first year of usage.
